

Step 1. Real-valued tabular features

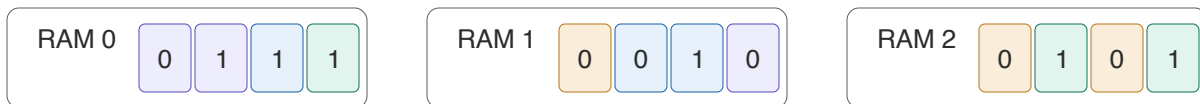

Step 2. Binarize each value with $t = 3$ thermometer bits

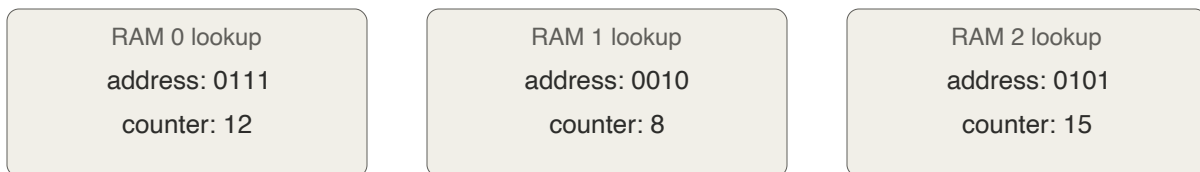

Step 3. Route bits into a-bit tuples, one per RAM

$a = 4$ bits per tuple; number of RAMs $R = \lceil n * t / a \rceil = \lceil 4 * 3 / 4 \rceil = 3$

Step 4. Look up each tuple as a RAM address; counters give scores

Counter values shown are illustrative

Class score: $12 + 8 + 15 = 35$
